
Weather Intelligence for Wind Energy - WILL4WIND - Inovativna meteorološka podrška upravljanju energijom vjetra

Kristian Horvath, Alica Bajić, Stjepan Ivatek-Šahdan,
DHMZ

kristian.horvath@cirus.dhz.hr

What are the key interactions of meteorology and wind energy?

1. Wind resources (meas, model, IAV, projections)

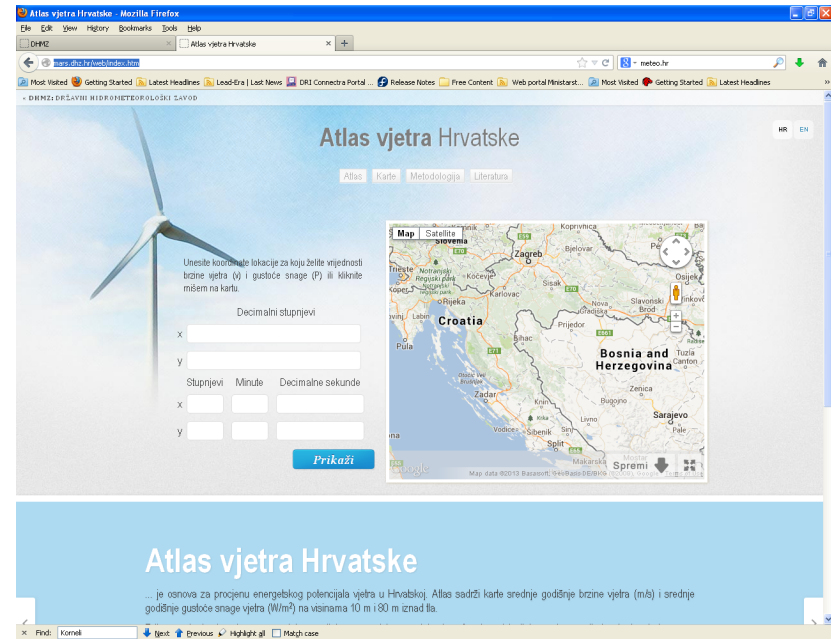

- Estimations inaccurate, typically overestimated

2. Prediction technologies on a range of scales

- Wind variability complicates grid integration
- Occasional large errors scale the system

3. Design, loads and wind turbine control

- Wind turbines are failing faster than predicted
- They are not designed for extreme weather conditions

What means to manage energy?

Wind energy management is

- Knowing what to do with produced energy
- How frequent is balance of production and consumption?

This is far from a simple problem:

- Includes knowing and predicting production, consumption
- Issues of transmission, energy markets, reserves, even politics
- Variability and predictability are key words

Predictions:

- Required for efficient (wind) energy management
- Required forecast horizons from seconds to decades in complex terrain
- Required realistic treatment of wind prediction uncertainty in complex terrain
- Q: Which forecast range is currently the greatest challenge to wind energy development *in Croatia*?

WILL4WIND „factsheet“:

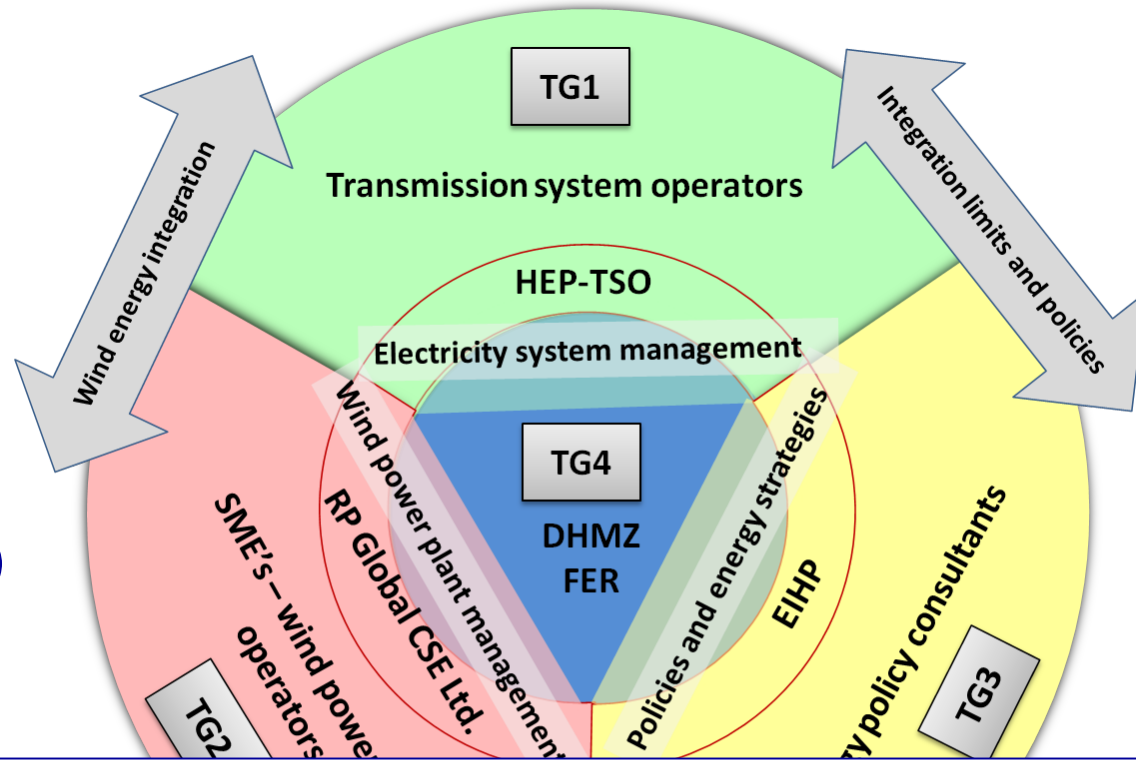

- Starting date: 10.4.2013.
- Duration: 24 months
- Cost: 535.863,41 EUR
 - 438.336,27 EUR from EU
 - 97.527,14 nacional co-financing
- Grant scheme: IPAIIIC, Science and innovation investment fund (www.siif-croatia.com)

- 22 persons in the project team, from 5 institutions
- 4 young researchers employed (2 DHMZ, 2 FER)
- From this grant scheme, 4 young researchers in 2013 employed for 2 years at DHMZ (DHMZ- Iris Odak, Josipa Kuzmić, Mario Hrastinski, Igor Horvat)

Project consortium: "handling all aspects"

1. DHMZ
2. FER
3. HOPS
4. EIHP
5. RP GLOBAL
- Projekt
(6. Končar Institut)

Energy systems are local-oriented – need for local interactions

Croatian consortium = Solutions for specifics of Croatian wind climate

Incentives and policies

Ovaj projekt financira EU

Science and innovation investment fund, contract no. IPA2007-1R/16IPO/001-040507

Meteorološki izazovi 3 Ekstremne vremenske prilike i utjecaj na društvo
Zagreb, Kraš auditorium, 21. studeni 2013.

ALADIN model chain

- A set of dynamical refinements

GLOBAL MODEL ARPEGE/IFS

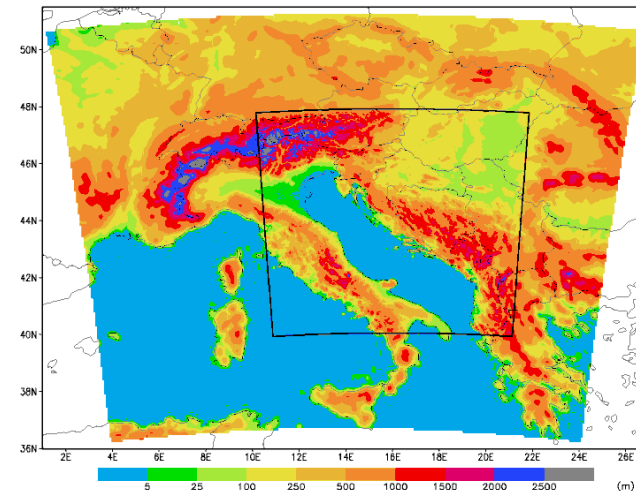

Grid spacing ~ 12 km

REGIONAL REFINEMENT 1

Grid spacing ~ 8 km
Mesoscale data assimilation

SUBREGIONAL REFINEMENT 2

Grid spacing ~ 2 km

Specific goal 1

Goal 1:
Enhance weather
prediction system
(DHMZ, FER)

Enhance ALADIN weather
prediction model

Develop ultra-short range
wind forecast (0-3 h)

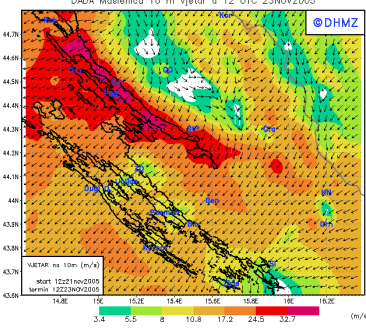

STATE-OF-THE-ART REGIONAL MODEL

- Advance mesoscale data assimilation (currently ~100.000 observations)

+

LOCAL REFINEMENT

- Grid spacing ~ 1 km

WINDAR na 10m (m/s)
vrijeme: 12231 nov-2005
lokacija: 12233NOV2005

Color scale for wind speed (m/s): 3.4, 5.5, 8, 10.8, 15.0, 17.2, 24.5, 32.7, 38.2

Usporedba vrijednosti kriterija za NM sa 36 izlaza i perzistentni model

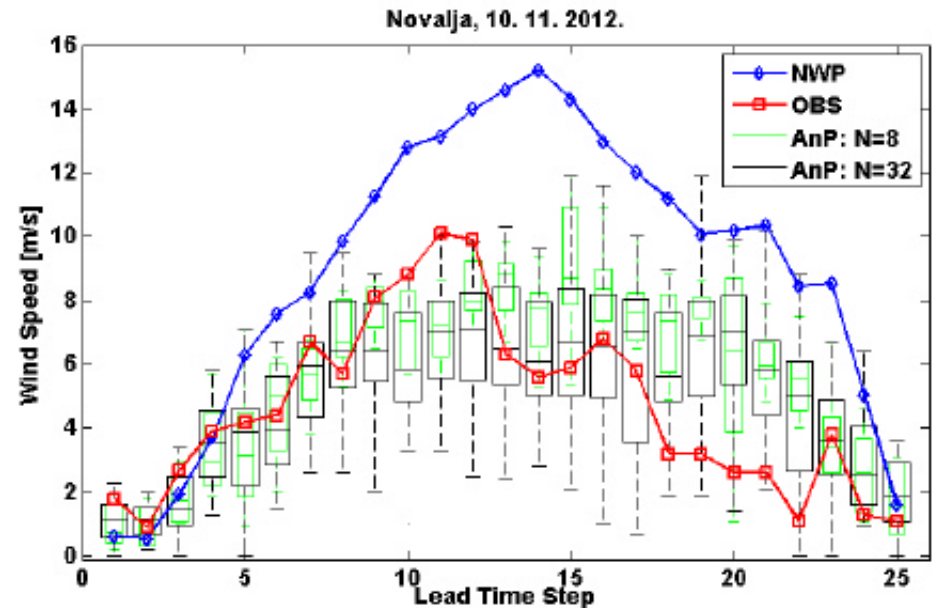

Specific goal 2

Goal 2:
Estimate errors and uncertainty
intervals of wind predictions

Develop probabilistic
wind prediction model

Enhance monitoring system

Specific goals 3 & 4

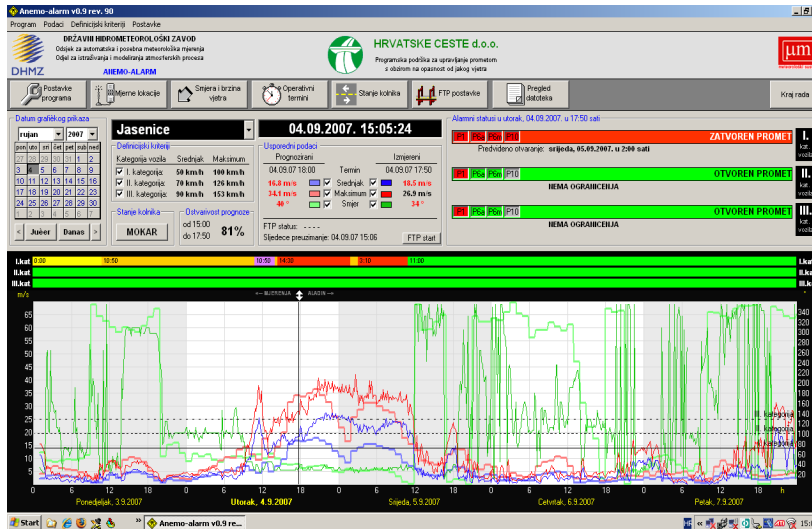

Goal 3:

Integrate developed technologies into forecasting and energy management processes

Goal 4:

Raise awareness of applied meteorological research

Workshops, panels, newsletters, conference etc.

DHMZ

1. WILL4WIND workshop (67 participants, 25 institutions)

Conclusions

- Meteorological aspects of wind energy are important, but are only one piece of a puzzle
- There is a substantial gap between meteorology and wind energy sectors, but there is an increasing interest for interaction
- Meteorologists need to showcase their methods and technologies are useful, and better understand the real needs of the wind energy sector
- WILL4WIND is a unique opportunity to strengthen collaboration between meteorology, ICT and energy sectors

Thanks for your attention!
Hvala na pažnji!
